Professional Summary

Computer Science and Engineering student specializing in Artificial Intelligence and Machine Learning, with hands-on experience across full-stack web development, applied AI, and secure systems design. Proficient in JavaScript, Angular, Node.js, Flask, REST APIs, Python, SQL, and MongoDB, with a track record of shipping features across civic-tech, cryptography, real-time NLP, and biometric authentication projects.

Education

RV University, Bengaluru

B.Tech in Computer Science and Engineering – Artificial Intelligence & Machine Learning

2023 – 2027

CGPA: 6.23/10

BGS Science Academy and Research Center, Chikkaballapur

Higher Secondary Education, Karnataka State Board

2023

84.17%

Kishora Vidya Bhavana, Chintamani

Secondary Education, Karnataka Secondary Education Examination Board

2021

95.05%

Projects

FixItHub – Community Issue Reporting Platform

- Engineered core modules of a full-stack civic issue-reporting platform using Angular, Flask, MongoDB Atlas, and REST APIs, deployed on cloud infrastructure
- Delivered issue tracking, image uploads, geolocation, authentication, comments, voting, and admin dashboards, cutting average issue-reporting time by 25%

DefenceShield – Post-Quantum Defence Management System

- Architected a browser-based document management system with five-level role-based access control, document authorization, and centralized audit logging, bringing 100% of stored documents under encryption
- Implemented post-quantum and symmetric cryptographic mechanisms – Kyber-1024, Dilithium-5, AES-256-GCM, and SHA3-512 – to harden document handling against classical and quantum threats

OmniMeet AI – Real-Time Multilingual Meeting Assistant

- Built a browser-based meeting assistant using JavaScript speech APIs for real-time speech-to-text, multilingual translation, and live transcript visualization, reaching 95% transcription accuracy
- Extended the assistant with summarization, sentiment analysis, action-item extraction, topic detection, and TXT/JSON transcript export

BioAuth – Multimodal Biometric Authentication System

- Developed a Python-based multimodal biometric authentication system combining webcam face recognition with serial fingerprint verification via a Tkinter interface, reducing the false-accept rate to 2%
- Applied MTCNN face detection, FaceNet embeddings, and a linear SVM classifier to power enrollment, model training, and confidence-based identity verification

Research

Beyond Accuracy – Comparative Analysis of Prompt Serialization Strategies for Tabular Data

- Benchmarked JSON, template, key-value, and natural-language serialization strategies for tabular classification using Microsoft Phi-3-mini, evaluating accuracy, F1-score, latency, token usage, and SHAP-based interpretability
- Uncovered a statistically significant effect of feature ordering on model performance ($p = 0.0015$), surfacing practical guidance for serialization design

Technical Skills

Web Development: HTML5, CSS3, JavaScript, Angular, Node.js, Flask, REST APIs

Languages: Python, Java, C++, C, SQL

Databases: MongoDB, MySQL

AI & Machine Learning: NLP, Computer Vision, Speech Recognition, Scikit-learn

Tools: Git, GitHub

Certifications & Courses

Claude 101 – Anthropic, 2026

SQL and Relational Databases 101 (DB0101EN) – Cognitive Class, powered by IBM Skills Network, September 2026

Frontend Developer (React) – HackerRank, September 2026
